PROJECTS

Project Title: Shape Based Game
Technologies: Java concepts such as class, Object, Constructor, Inheritance, Polymorphism, Upcasting, Method Overriding, HAS-A Relationship, Interface

Description:
I designed and implemented an engaging educational game tailored for students in classes 6 to 12, aimed at enhancing their understanding of 2D and 3D shapes. The game features a user interface that allows students to interact with various shapes by clicking on them. Using object-oriented programming principles, I incorporated key concepts such as has-a relationships, method overriding, method overloading, constructor overriding, inheritance, and upcasting to create a robust and extensible codebase.
